'APC' MICRO CONDENSER

'HFD' SPLIT-STATOR  
MICRO CONDENSER

'HF' MICRO CONDENSER

## ... For Smooth Sailing

WITH Hammarlund "HF" and "APC" micro condensers in your receiver or transmitter you can always depend on "smooth sailing" performance for superior results! This outstanding series of condensers uses Isolantite insulation and cadmium-plated soldered brass rotor and stator plates to insure lowest losses, rigidity, and constant capacity under any conditions of temperature, humidity, or vibration.

There are five "APC" types with capacities ranging from 25 to 140 mmf. Their sizes vary from 5/16" to 1-7/32" as indicated by dimension "A" in the drawing above. Ideal as air dielectric trimmers for gang condensers, I.F. transformers, and for padding R.F. circuits.

The "HF" micro condensers have many advanced features that afford highest efficiency in tuning or trimming critical high frequency circuits. Three different mounting methods are provided—base mounting by means of a bracket, single hole panel mounting, or panel mounting by means of two insulated spacer bushings. Equipped with special wide front bearing, and noiseless in operation. Capacities of six "HF" stock models are from 17.5 mmf. to 140 mmf.; the sizes from 1/4" to 1-7/32" (dimension "A"). A double spaced model is also available.

The "HFD" split-stator micro condensers have aluminum front and rear end plates mounted on a heavy Isolantite base. A wide front bearing and a special split rear bearing together with individual silver plated Beryllium wipers for each section assure long life and noiseless efficient operation. Rotor contact can be shifted to three positions to permit shortest possible leads. Single hole panel mounting or base mounting, with shield between sections for ground connection. Capacities of four "HFD" models are from 28.5 mmf. (double spaced type) to 140 mmf., with sizes varying from 2-5/16" to 2-15/16" (dimension "A").

Further details on these new outstanding condensers appear in the new "37" catalog. Mail coupon below today for your copy!

YOU'RE  
*On the Air*  
QUICKLY AT LOW COST  
WHEN YOU BUILD THE  
**PROGRESSIVE III**

450 WATTS INPUT, CW OR PHONE  
AT 10 - 20 - 40 - 80 - 160 METERS

Don't let another DX season slip away while you experiment with dubious circuits. Don't waste your time and money! Reach out . . . work the world with a rig that **you've built yourself**—the PROGRESSIVE III.

A screw driver, pliers and soldering iron are all of the tools needed to build this master transmitter out of **standard parts**, obtainable from your jobber. Panels and chassis are furnished completely drilled, with all sockets installed. Start at small cost, if you wish, with the low power and exciter units. Then, when you're ready to add phone or more power, build PROGRESSIVELY—without discarding parts.

Symmetrical arrangement of parts above and below the chassis reduces length of lead wires to a minimum and utilizes the chassis for shielding. Circuit capacities are extremely low, permitting **full power input**—either phone or C.W.—even on the 10 meter band. Band changing with standard plug-in coils is fast and easy, because the circuit **remains neutralized** at all frequencies.

Complete building instructions are contained in the **AMATEUR TRANSMITTER MANUAL**, 25c postpaid from your jobber or Amateur Press, 333 S. Throop Street, Chicago. Send for your copy today!

**5 METER  
FANS!**

WORK 5-10-20 METERS  
AT WILL WITH THE  
CRYSTAL-CONTROLLED  
STREAMLINER

At last! 5 meter operation has been blue-printed! Not only that, but the **STREAMLINER**, which **you can build yourself**, gives you: (1) Crystal control to keep your signal "in the groove" (2) Instant, easy changing with plug-in coils to 5, 10 or 20 meters (3) Full 110 watt input, CW or phone.

You can build it PROGRESSIVELY, same as the PROGRESSIVE III at the left, from standard parts, with the aid of clear, detailed instructions in the **Amateur Transmitter Manual**. Get a copy from your jobber, or send 25c to Amateur Press, 333 S. Throop Street, Chicago.

*And...* **BUILD WITH  
STREAM LINE TRANSFORMERS**

You won't be annoyed with lamination hum. All-over metal housings, solidly clamp the core all-around, and act as a shield. And you won't risk break-downs due to moisture! Coils are moisture-proofed by the famous GTC "Pull-Push" Process. What's more, radically new design saves as much as 25% in space and weight on your chassis. There are **Stream-Line** Transformers and Chokes for every amateur transmitter requirement. Ask your jobber, or write for free Bulletin 44, which also illustrates and describes the Progressive III.

# OHMITE

## RESISTORS - RHEOSTATS - SWITCHES - CHOKES

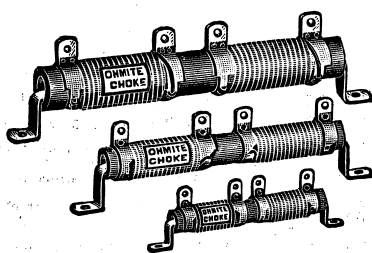

### VITREOUS ENAMELED RESISTORS

These all-porcelain rheostats provide close accurate primary voltage control that prolongs the life of transmitting tubes and keeps them operating at peak efficiency. They are built entirely of porcelain and metal, with no organic material to smoke or char. Model H, J and K are rated at 25, 50 and 100 Watts respectively and can be furnished in a variety of resistance values.

### "BROWN DEVIL" Vitreous Enamel RESISTORS

Brown Devils are wire wound, vitreous enamel covered units of the finest possible construction. The vitreous covering offers better protection against moisture and acid fumes than any other material. Insist on "Brown Devil" and avoid breakdowns.

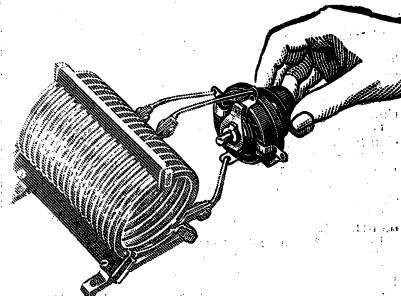

### POWER LINE CHOKES

Designed to suppress high frequency interference from going out over power lines from your transmitter. These Chokes will keep your rig from annoying your neighbors and eliminate complaints. Can also be used on receivers to suppress high frequency coming in over power lines.

### TRANSMITTER BAND SWITCHES

These band-changing switches substitute a quick, convenient turn of a knob in radio transmitter operation for the former cumbersome plug-in-coil method. Band-changing may be provided in all stages of a radio transmitter, and may be done by "ganging" for complete front-of-panel control.

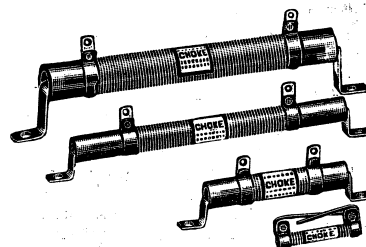

### "DIVIDOHM" Semi-Variable RESISTORS

These adjustable resistors can be quickly adjusted to any desired resistance value by means of a ball-pointed adjustable lug. A patented scale makes resistance reading possible at a glance. Excellent for experimental work.

### HIGH FREQUENCY CHOKES

Single layer wound on steatite tubes, these solenoid chokes have been engineered to avoid either fundamental or harmonic resonations when used on specified frequencies. Especially designed for use on amateur radio transmitters.

**A**NY night on the amateur bands you will hear a better advertisement of the Standard HRO than we could write. The unqualified enthusiasm of men who have spent years mastering the fine points of high frequency communication counts for more than a long list of unusual details, even though those details include such items as the PW Precision Condenser, calibrated band spread and a crystal filter as effective on phone as c.w. The demands of modern radio are rigorous, and the proof of the pudding is in the eating.
